Scenario

- The CS course is going to be held in the SmartRoom. The students are announced of the change. When all students arrive, the lecture can begin.
- The room is configured automatically depending on the phase of the lecture: before the presentation; presentation; student activity.
- The student activity is a brainstorming sessions in which students present their opinions and discuss them in groups. The SmartRoom assists them by managing the students' opinions.

Agentification

Scenario steps

- Step 1 “Welcome”
 - The room for the lecture is changed => announce to users the location of the room;
 - When users enter the SmartRoom => configure room;
- Step 2 “Lecture”
 - When all students and the professor are in the room => configure the room, start presentation;
- Step 3 “Brainstorming”
 - Students write opinions => display opinions on screens;
 - When students move in the room => move opinion display.
